The Reverb 2016 recreates the legendary reverb algorithms of Eventide's SP2016 – Stereo Room, Room Reverb and High Density Plate. Every aspect of the original effects has been duplicated including every detail of the user parameters. While the algorithms are identical to the originals, the hardware implementation is state-of-the-art, with features that include a high-performance 24-bit DSP, 24-bit analog audio I/O, digital I/O and a MIDI interface. The Reverb 2016 is extremely easy-to-use featuring dedicated controls for each of the effect's parameters. The intuitive controls and display are optimized for the studio and for live performance. Up to 99 user presets can be stored.
